Environment Agnostic by Configurable

► Normalize common variables

```
is_travis() {
    [[ "${TRAVIS:-false}" == "true" ]]
}

is_circleci() {
    [[ "${CIRCLECI:-false}" == "true" ]]
}

is_otherwise() {
    ! is_travis && ! is_circleci
}

project_slug() {
    if is_travis; then
        echo "$TRAVIS_REPO_SLUG"
    elif is_circleci; then
        echo "$CIRCLE_PROJECT_USERNAME/$CIRCLE_PROJECT_REPONAME"
    elif [[ "${PROJECT_SLUG:-false}" != "false" ]]; then
        echo "$PROJECT_SLUG"
    fi
}
```

Environment Agnostic by Configurable

- ▶ Be independent on specific CI/CD services
- ▶ ~~Separate implementations for each platforms~~
- ▶ Configure inputs and dependencies before processing
 - ▶ Not a BLoC pattern but refer to it
 - ▶ Define CL inputs and injectable dependencies
 - ▶ Don't depend on any platform in the core logic
