

Deployment Pipeline – Release Flow

- ▶ Use alpha track as just a release management
- ▶ Try the production build via DeployGate
 - ▶ Didn't pin the link anywhere but it was visible on Travis :)
- ▶ Why Travis?
 - ▶ Because of secure tokens matter 😂
 - ▶ A playground to build iOS app as well

Be Flexible, Configurable, Semi-Interactive

- ▶ Be flexible with failures
 - ▶ **We** should handle CI failures instead of commands
- ▶ Be configurable by injection
 - ▶ Manipulate dependencies & platform-specific values.
- ▶ Be semi-interactive
 - ▶ Collect stats and reports, also rely on the bot.
