

Points To Be Improved

- ▶ So many many many... lets pick up several points.
- ▶ CircleCI Checks are not visible to everyone
- ▶ Use Orbs by upgrading to CircleCI 2.1
- ▶ Promote the alpha track to production safely
 - ▶ CircleCI's approval is it. If TravisCI is for contributors and CircleCI is for the release, then it made sense.

Points To Be Discussed

- ▶ Prog. Languages of commands.
 - ▶ Gradle tasks? BashScript? Ruby? kts?
- ▶ Only one contributor tweaked CI/CD configurations.
 - ▶ Did it mean *difficult*? or stable? Not sure.
- ▶ How to build; Use Gradle directly? through Fastlane?
 - ▶ If we need to build iOS app as well, Fastlane is better.
