## Points To Be Improved

- So many many many... lets pick up several points.
- CircleCl Checks are not visible to everyone
- Use Orbs by upgrading to CircleCl 2.1
- Promote the alpha track to production safely
  - CircleCI's approval is it. If TravisCI is for contributors and CircleCI is for the release, then it made sense.

## **Points To Be Discussed**

- Prog. Languages of commands.
  - Gradle tasks? BashScript? Ruby? kts?
- Only one contributor tweaked CI/CD configurations.
  - Did it mean \*difficult\*? or stable? Not sure.
- How to build; Use Gradle directly? through Fastlane?
  - If we need to build iOS app as well, Fastlane is better.
