Be Flexible, Configurable, Semi-Interactive

- Be flexible with failures
 - *We* should handle CI failures instead of commands
- Be configurable by injection
 - Manipulate dependencies & platform-specific values.
- Be semi-interactive
 - Collect stats and reports, also rely on the bot.

Be Good Examples and Provide a Deployment Pipeline

- Be good examples
 - Show how to set up, how to collaborate with CI
- Give a chance to use Deployment pipeline
 - Small but enough if it's effective. (minimum req.)
