Flexible $\subset$ Not Fragile (Stable)

▸ ~~No failure is allowed~~

▸ Non-flexible with failures is an evil

  ▸ BAD: Fail CI anyway if any task fails

  ▸ BAD: Do not run a Test task if lint fails

▸ How to make it flexible?

  ▸ Check command status and make CI/CD fail if needed

  ▸ Separate jobs if possible

Know Rules of Command Set To Be Executed

▸ Basically you have multiple roles in your dep. pipeline
