How To Have a Faster Download Experience

▸ CDN produces this advantage

▸ Therefore, first download from the signed URL is not fast, unfortunately

▸ **Download your artifact first on CI right after deployment**

```
artifact_url=$(<response> | jq -r ".results.file")
curl -SLs $artifact_url >/dev/null
```

▸ Note that the URL will be expired, so this tip does not work if new URLs are published

Distribution Tracks

▸ Download pages for specific versions

　　▸ Like named internal track on Google Play Store
